# Protect Column & Wall Edges

- Industrial & Building Safety Products

The rubber compound makes a perfect protector of columns and corners because it is inexpensive and easy to maintain. The rubber will not wrap, crack, chip or rot.

**Quick Installation** - Corner Protectors are installed using screws or epoxy adhesive (not supplied) into concrete or steel columns. They are lightweight, easy to handle and can easily be installed by one person.

**Yellow Delineation** - Our Corner Protectors have yellow reflective strips making the corner the protector clearly visible to motorists and pedestrians both day and night.

## All Size of Rubber Column Guard

| Model No | Shape       | Length     | Width         | Thickness | Weight |
|----------|-------------|------------|---------------|-----------|--------|
| NH-001   | Arrow Shape | 35" Approx | 4"x4" Arpprox | 10-12mm   | 2.6 Kg |
| NH-002   | D Shape     | 40" Approx | 4"x4" Arpprox | 10-12mm   | 2.8 Kg |

# Rubber Dock Fenders

- Protecting Loading Dock Stations & Vehicles from Damage

We offer a comprehensive range of moulded and extruded marine rubber fenders which are cost effective and efficient solutions to suit any operating environment, condition and requirement. The principle purpose of a rubber fender system is to protect the hull and berthing facility from damage when vessels berth alongside. The fender functions as a shock absorber by absorbing the berthing energy of a vessel on berthing facility.

- Standard Rubber Dock fenders
- Extra-length loading Rubber Dock fenders
- Extra-thick loading Rubber Dock fenders

# Rubber Speed Humps

- Synthetic Rubber
- Material Sold Black & Yellow Color

Speed Bumps and Humps are an easy way to deter excessive speed. We offers various types of speed bumps and road humps that will slow down traffic and offer pedestrians more security as they walk from their cars to their jobs.

- Includes all mid-sections, end-caps and fixings
- Ideal for Residential and Commercial areas
- Highly Durable
- Quick and Easy Install

# RUBBER WALL GUARDS

- Easy to Install
- Dimensional accuracy
- Yellow reflective strip
- One Piece Construction
- Durability

Prevent those little bumps from turning into big damage with a rubber wall guard. This simple addition absorbs and minimize damage when a heavy or light vehicle accidentally contact a wall. The wall guard is resistant to water, oil, UV light and extreme temperatures, so it can be used indoors or outdoors, in commercial or retail areas, parking structures, warehouse, industries or even a home garage.

- The wheel when set against the rubber chocks experiences the flexibility
- Unique capability of rubber chokes is possible due the equilateral round shape
- Distinct internal design of the product

# Bridge Expansion Rubber Joints

- Motorways
- Road Bridges

Rubber bridge expansion joints are mainly made of rubber, steel plate and angle iron. Steel plates are set in the rubber bridge expansion to strengthen the bearing capacity and they can slide freely along the angle iron to meet the expansion deformation of main grid.

Because of the excellent salability and shock-absorbing effect of rubber, rubber bridge expansion joints do well in proofing water and reducing noise. The elasticity of rubber plates and its shear deformation in the telescopic channel helps the whole device to realize telescopic motion.

## Features

Rubber bridge expansion joints made of prime-quality rubber are anti-aging and have a long service life. Being wear-resistant, this product can withstand reiteration (unction of vehicle load). During installation, bolt holes on the bottom and each junction are filled with adhesion agent which makes the whole rubber bridge expansion joints be highly water-resistant.

# Wheel Chock

- Safe & Secure Grip

## For Cars, Suvs, Heavy and Mini Trucks

Wheel chocks help prevent vehicles and equipment from accidentally moving during loading and unloading of cargo. Wheel chocks are contoured to fit vehicle tires and prevent any possible slippage.

- Heavy-duty rubber wheel chocks
- Standard rubber wheel chocks

# Rubber Lane Divider

- Highest Visibility to the Median during Night & Enhanced Safety of Motorists and Vehicle

Lane Dividers are designed to perform a wide variety of traffic management purposes like indicating lone separation, cycle lanes, parking bays, and tramways. They also mark traffic lanes in car park entrances and exit ramps and protect tunnel walls from possible vehicle impact damage. When used with optional reflective panels, they are ideal for low light areas such as underground passages.

# Rubber Interlocking Floor Tile Matt

- Plain Surface
- Textured Surface
- Thickness 12 mm

Interlocking rubber flooring can be installed easily over nearly any smooth surface including concrete, asphalt, wood or tile. No special tools are required. The unique tab design holds the tiles together securely without the need of expensive adhesives, tapes or the labor to apply them

## Usage:

Gym, office, factories, hospitals, hotels, laboratories, laundries, bathroom, shops, supermarkets and skating rinks all have one thing in common - the need to provide a safe and comfortable medium for user...locking rubber flooring .n be installed easily over nearly any smooth surface including concrete, asphalt, wood or tile. No special tools are required. The unique tab design holds the tiles together securely without the need of expensive adhesives, tapes or the labor to apply them

- Good energy absorption.
- Reliable performance
- Durable standards
- Choose color options.
- Coin Texture mat non-slip surface.
- Floor protection.

# Neoprene Bearing Pads

- Rubber Bearing for Bridge & Construction

Black neoprene bearing pad is used as economical efficient bearing plates for pre-cast, pre-stressed concrete or steel beams in bridges and buildings. Neoprene Pads permit a smooth and uniform transfer of load from the beam to the substructure, allow beam rotation at the bearing due to deflection of the beam under load. They further allow lateral and longitudinal movement of the beam caused by thermal forces.

Neoprene Pads have no moveable parts and thermal expansion and contraction are absorbed by the pad's ability to give and take in shear. There is no sliding between pad and beam or between pad and abutment.
